Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of the claims in the application:

Listing of Claims:

1.   (Currently Amended) A method comprising:

receiving information about a patient, the information about the patient including diagnosis information based upon a diagnosis of the patient performed by a health care provider;

performing a query function to retrieve from a database a list of data sources based upon the received information about the patient; and

generating one or more documents containing the list of data sources retrieved from the database, wherein performing the query function comprises:

generating a set of queries containing query criteria based on the received information about the patient; and executing the set of queries to retrieve from the database the list of data sources matching the query criteria, wherein generating the set of queries comprises:

selecting a set of existing queries that correspond to the received information about the patient.

2.   (Original) The method of claim 1 wherein the diagnosis information comprises one or more diagnosis codes indicating one or more conditions of the patient based upon the diagnosis.

3.   (Original) The method of claim 2 wherein the one or more diagnosis codes comprise codes according to the International Classification of Disease (ICD).

4.   (Original) The method of claim 3 wherein the diagnosis information comprises one or more descriptions describing the patient's conditions or problems based upon the diagnosis performed by the health care provider.

5.   (Original) The method of claim 1 wherein the information about the patient further comprises information selected from the group consisting of the patient's personal information, prescription information, laboratory information, procedures information, materials and supplies information and injection information.

6.   (Original) The method of claim 1 wherein a data source is referenced by an address corresponding to a location where the data source resides.

3

7.   (Original) The method of claim 1 wherein the address corresponding to the

location where the data source resides comprises a Uniform Resource Locator (URL).

8.   (Cancelled) The method of claim 1 wherein performing the query function

comprises:

generating a set of queries containing query criteria based on the received

information about the patient; and

executing the set of queries to retrieve from the database the list of data sources

matching the query criteria.

9.   (Cancelled) The method of claim 8 wherein generating the set of queries

comprises:

selecting a set of existing queries that correspond to the received information

about the patient.

10.   (Original) The method of claim 8 wherein generating the set of queries

comprises:

constructing a set of queries based on the information received.

11.   (Original) The method of claim 10 wherein constructing comprises:

determining one or more diagnosis identifiers from the information received.

12.   (Original) The method of claim 11 wherein a diagnosis identifier corresponds to

a diagnosis code.

13.   (Original) The method of claim 11 wherein a diagnosis identifier corresponds to

a diagnosis description.

14.   (Original) The method of claim 11 wherein the one or more diagnosis identifiers

are included in the diagnosis information received.

15.   (Original) The method of claim 11 wherein the one or more diagnosis identifiers

are derived from the diagnosis information received.

16.   (Original) The method of claim 11 further comprising:

determining additional diagnosis identifiers that are equivalent to the one or

more diagnosis identifiers included in the diagnosis information received.

17. (Original) The method of claim 1 further comprising:

allowing the patient to access the one or more documents via a computer

network.

18. (Original) The method of claim 17 further comprising:

allowing the patient to provide feedback or comments with respect to the

information contained in the one or more documents.

19. (Original) The method of claim 18 wherein the computer network is selected

from the group consisting of a local area network, a wide area network, and the

Internet.

20. (Original) The method of claim 8 wherein the query criteria include contextual

information applicable to the diagnosis information received.

21. (Currently Amended) A <u>system to store information in a database and to</u>

<u>retrieve the information from the</u> database<u>, the system</u> ~~of information~~ comprising:

a first code corresponding to one aspect of a patient's health;

a list of one or more definitions corresponding to the first code; ~~and~~

a first list of data sources obtained based upon the one or more definitions, wherein the first code, the list of one or more definitions and the first list of data sources are utilized to store information in the database and to retrieve information from the database; and

a first set of queries containing query criteria based on the one or more definitions of the first code.

22.   (Currently Amended) The ~~database~~ system of claim 21 wherein the one or more definitions are used to identify a set of documents from which the data sources are selected.

23.   (Cancelled) The ~~database~~ system of claim ~~26~~ 21 further comprising:

a first set of queries containing query criteria based on the one or more definitions of the first code.

24.   (Currently Amended) The ~~database~~ system of claim 23 wherein the query criteria further comprise contextual information applicable to the first code.

25.   (Currently Amended) The ~~database~~ system of claim 23 wherein the queries are used to identify the set of documents from which the data sources are selected.

7

26.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein the first code is a

diagnosis code indicating a condition or a problem with respect to the patient's health.

27.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein the first code is a

code according to the International Classification of Disease (ICD).

28.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein the first code is a

code according to the Current Procedural Terminology (CPT).

29.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein the first code is a

code according to the HCFA Common Procedure Coding System (HCPCS).

30.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein the first code is a

code according to the READ code classification.

31.   (Currently Amended) The ~~database~~ <u>system</u> of claim 21 wherein a data source is

referenced by an address corresponding to a location where the data source resides.

32.   (Currently Amended) The ~~database~~ system of claim 31 wherein the address corresponding to the location where the data source resides comprises a Uniform Resource Locator (URL).

33.   (Original) A method of developing a database of information, comprising:

generating one or more queries based upon a code;

identifying one or more documents based upon the one or more queries;

performing a selection process to select a subset of documents from the one or more documents identified based upon a set of selection criteria; and

storing the subset of documents in the database.

34.   (Original) The method of claim 33 wherein the code is an International Classification of Disease (ICD) code.

35.   (Original) The method of claim 33 wherein the one or more queries are based upon a first definition of the code according to a specific classification scheme.

36.   (Original) The method of claim 33 wherein the one or more queries are based upon one or more additional definitions of the code.

37. (Original) The method of claim 33 wherein identifying the one or more documents comprises:

identifying a list of databases on the World Wide Web (WWW); and

searching the databases using the one or more queries to identify the one or more documents that match the query criteria specified in the one or more queries.

38. (Currently Amended) A system comprising:

a first database to store multiple lists of content links, each list corresponding to a specific code; and

a first server to receive information about a patient from one or more sources, said information about the patient including one or more codes, the first server to retrieve from the first database one or more lists of content links based upon the one or more codes received, the first server to generate one or more documents containing the one or more list of content links retrieved from the first database, wherein the first server includes a machine-readable medium comprising instructions which, when executed by a machine, cause the machine to perform operations, the instructions to comprise:

logic to generate a set of queries based upon one or more definitions corresponding to the one or more codes received.

39.   (Original) The system of claim 38 wherein the one or more documents

generated are stored in a second database.

40.   (Original) The system of claim 38 wherein the one or more documents are made

accessible to the patient via a computer network.

41.   (Original) The system of claim 38 wherein the computer network is the Internet.

42.   (Currently Amended) The system of claim 38, wherein the first server includes a

machine-readable medium comprising instructions which, when executed by a

machine, cause the machine to perform operations, the instructions to comprises

comprise:

        logic to receive the information about the patient from the one or more sources;

        logic to generate a set of queries based upon one or more definitions

corresponding to the one or more codes received; and

        logic to execute the set of queries to retrieve from the first database the one or

more list of content links that correspond to the set of queries.

43.   (Original) The system of claim 38 wherein each list of content links stored in the first database is identified using a set of queries generated from one or more definitions associated with the respective code.

44.   (Original) The system of claim 38 wherein the set of queries is used to search one or more databases on the World Wide Web to identify a potential list of content links.

45.   (Original) The system of claim 38 wherein the potential list of content links is used to select the corresponding list of content links that is stored in the first database.

46.   (Currently Amended) A machine-readable medium comprising instructions which, when executed by a machine, cause the machine to perform operations comprising:

receiving information about a patient, the information about the patient including diagnosis information based upon a diagnosis of the patient performed by a health care provider;

performing a query function to retrieve from a database a list of data sources based upon the received information about the patient; and

generating one or more documents containing the list of data sources retrieved from the database, wherein performing the query function comprises:

generating a set of queries containing query criteria based on the received

information about the patient; and executing the set of queries to retrieve from the

database the list of data sources matching the query criteria, wherein generating the set

of queries comprises:

selecting a set of existing queries that correspond to the received information

about the patient.

47.   (Original) The machine-readable medium of claim 46 wherein the diagnosis

information comprises one or more diagnosis codes indicating one or more conditions

of the patient based upon the diagnosis.

48.   (Original) The machine-readable medium of claim 46 wherein the diagnosis

information comprises one or more descriptions describing the patient's conditions or

problems based upon the diagnosis performed by the health care provider.

49.   (Original) The machine-readable medium of claim 48 wherein performing the

query function comprises:

generating a set of queries containing query criteria based on the received

information about the patient; and

executing the set of queries to retrieve from the database the list of data sources

matching the query criteria.

50.   (Original) A machine-readable medium comprising instructions which, when

executed by a machine, cause the machine to perform the following:

generating one or more queries based upon a code;

identifying one or more documents based upon the one or more queries;

performing a selection process to select a subset of documents from the one or

more documents identified based upon a set of selection criteria; and

storing the subset of documents in a database.

51.   (Original) The machine-readable medium of claim 50 wherein the code is an

International Classification of Disease (ICD) code.

52.   (Original) The machine-readable medium of claim 51 wherein the one or more

queries are based upon a first definition of the code.

53.   (Original) The machine-readable medium of claim 52 wherein the one or more

queries are based upon one or more additional definitions of the code.

14

54.   (Original) The machine-readable medium of claim 50 wherein identifying the

one or more documents comprises:

identifying a list of databases on the World Wide Web (WWW); and

searching the databases using the one or more queries to identify the one or more

documents that match the query criteria specified in the one or more queries.

55.   (Currently Amended) A system to store information in a database and to

retrieve the information from the database, the system comprising:

a list of patients; and

for each patient in the list, a set of documents each generated based upon

information received from a healthcare provider following the respective patient's visit

to said healthcare provider, said set of documents being accessible by said respective

patient via a computer network, wherein the list of patients and the set of documents

are utilized to store information in the database and to retrieve information from the

database, and

a first set of queries containing query criteria based on the one or more

definitions of the first code.

56.   (Currently Amended) The database system, of claim 55 wherein the information

received from said healthcare provider comprises one or more codes, said one or more

codes being used to retrieve one or more lists of data sources to be included in the

respective document for the respective patient.
